REALVISION 3D MEDICAL MONITOR FOR LAPAROSCOPY

The Realvision 3D system for laparoscopy combines most of laparoscopic columns on the market with our 28" and 43" 3D medical monitor.

The stereoscopic vision improves the hand-to-eye coordination, the intracorporeal suturing and the fine dissection, thus facilitating surgeries and reducing the operation time.

Our monitor is compatible with the most of laparoscopic columns on the market without software / hardware modification

3D images of Realvision 3D system are faithful to the real image and without alterations up to the single sub-pixel, thus enabling surgeons to perform more precise surgeries without straining their eyesight.

Our system is particularly suited for surgeries in the field of gynecology, general surgery and urology.
