

**HEALTHCARE
OPTICAL SPLITTER**

**REALVISION 3D MEDICAL MONITOR
and OPTICAL SPLITTER**

The Realvision 3D optical splitter converts any traditional operating microscope in 3D, without altering its original functions.

It is designed to minimize user's physical efforts and to ensure crystal clear 3D images on Realvision 28" and 43" 3D medical monitor.

It is possible to convert any traditional operating microscope into 3D by using our optical splitter together with our medical monitor.

The Realvision 3D monitor and optical splitter enables you to display on our monitor what is usually seen under a traditional microscope, keeping the binocular vision unchanged.

Some of the advantages of using the Realvision 3D Optical Splitter are:

- improvement of posture during work
- greater freedom of work and a quick choice between binoculars or monitor
- complete mobility of the operator's head
- elimination of the visual fatigue due to microscope use
- simultaneously visualization of 3D images among operators and viewers
